

ShortUrl for SharePoint

We are pleased to announce the availability of our latest product for the SharePoint market, **ShortUrl**.

ShortUrl allows the creation and use of vanity and shortcut hyperlinks. Too often and especially with large complex installations, the structure of a SharePoint site collection can lead to enormously long hyperlinks, which makes for ugly and error prone hyperlinks.

For example, compare the following hyperlink to a folder in a document library:

<https://yoursite/clients/abc%20company/Shared%20Documents/Forms/AllItems.aspx?RootFolder=%2fclients%2fabcd%20company%2fShared%20Documents%2fClient%20Requirements&FolderCTID=&View=%7b80C76B49%2dFA92%2d490E%2dAFBF%2d8A07F9C73CCE%7d>

When you use **ShortUrl**, it can also be:

<https://yoursite?goto=abc>

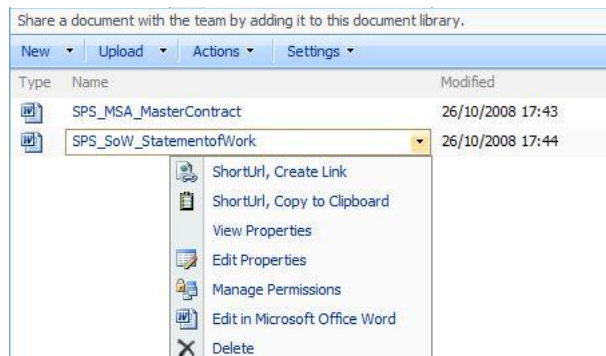

This makes emailing the link, putting it into documents or even saying it over the phone much simpler and less error prone.

Compatible with:
WSS 3.0 & MOSS 2007
32 & 64 bit systems.

Provided as a very lightweight,
deployable solution file,

All code and shortcuts are managed
within the SharePoint environment.

A shortened hyperlink can be created directly from the items context menu in a standard Document Library and if one has already been created, you can instantly copy the shorter hyperlink to the clipboard.

Standard SharePoint List

All the shortcuts are stored in a regular SharePoint List which allows all the standard functionality of audit trails, workflow, security permissions, item approval and so on, to naturally dovetail with this new functionality.

ShortUrl Features & Benefits

One of the great selling points of SharePoint for an organisation is the ability to keep documents and information centrally and the supporting mechanism for this is to send hyperlinks to colleagues and clients.

By having a cleaner way to manage lengthy hyperlinks, you will gain a very significant productivity improvement with hardly any effort or expense.

- Unlimited Shortened Hyperlinks.
- Date expiry for short lived Hyperlinks.
- Hyperlink ownership for audit trails.
- Very easy to use, no training required.
- Very easy to install.
- Tightly integrated with SharePoint.
- Reduces Errors.
- Improves productivity.
- Allows vanity hyperlinks.
- Users will love it.

To download a free, working trial of **ShortUrl**, visit our website. We provide a selection of flexible licenses and ordering options.

To purchase **ShortUrl** for SharePoint, call or email us, you know it makes **Sense**.

Who Are SharePoint Sense?

- Architecture, Design & Planning
- Management of SharePoint Projects
- Solution Development
- User Interface Customisation
- SharePoint Resources & Staffing
- Hosting and Support

Architecture & Design

When planning a SharePoint deployment, no matter how large or small, the most important aspect is to plan and design it correctly from the start. This requires advanced knowledge of the product suite, in-depth knowledge about network and hardware infrastructure and a great understanding of how the business will use SharePoint. We'll help you design and plan a scalable, reliable and cost effective solution.

Credibility

We have designed, installed, configured and repaired SharePoint systems for Investment Banks, Hedge Funds, Airlines, Sports, Petroleum Companies, Advertising Agencies, Travel Companies, Education, Audit & Accounting Consultancies and many more. This shows the nature and versatility of our consultants to provide expert advice across a number markets and the adaptability of SharePoint to fit into your company.

Bespoke Developments

We often develop custom controls, web parts and applications for clients that can have particular requirements. From simple weather web parts through single page applications to complex machine state workflows and complete applications. We are very skilled with SharePoint and all of our consultants are from a development background. Not only can we develop to a set of requirements, we also produce our own commercial software for use with any SharePoint installation. Of course, the real art of great consultancy in the World of SharePoint is to get the application to do the job without any custom code and there's none better than [SharePoint Sense](#) for that.

SharePoint Health Check

One of the more common requests we get is to evaluate a current SharePoint installation. It's a sad fact that many rushed, ill planned or badly managed deployments of SharePoint go wrong. To get it all on the right track again can be difficult if a company does not have the specialist staff on hand. We can visit your premises and in two days, depending on the complexity of the installation, provide a complete and honest analysis about the state of the installation with recommendations about how best to improve the situation, tips, suggestions and advice. This is often the first step for most of our clients.

Free Initial Consultation

For qualifying companies we offer a free half hour telephone consultation with one of our experts to discuss your requirements.

We're ready and waiting to help you use SharePoint to the full and make the most of your IT budget. To discuss your requirements, call or email us, you know it makes [Sense](#).
